NO CLOUD · NO SUBSCRIPTION

Your data stays on your network.

The TV2 monitors temperature, humidity and differential pressure without a cloud service, a vendor account or a monthly fee. Readings are stored on the monitor and on your own computer, and nowhere else.

No cloud	No subscription	Your network	Works offline
No vendor server stores, relays or sees your readings.	Buy the monitor once. The PC software is free.	Ethernet or Wi-Fi on your LAN, or a USB cable.	Display, alarms and logging need no internet.

Where your data goes

1 Sensor to monitor
Wired or wireless sensors report straight to the TV2, not to the internet.

2 Stored on the monitor
Logged in memory that keeps data without power and can't be edited.

3 Copied to your PC
Free TView software downloads the log over your network or USB.

4 Alerts from your systems
Email through your own account. Buzzer, relay and dialer need no network.

That is the whole path. There is no 2DI server anywhere in it.

Who holds the data

TV2 with TView	Typical cloud monitoring
✓ Data stored on the monitor and your own PC	Data stored on the vendor's servers
✓ Alarms keep working if the internet goes down	Alerts depend on the vendor's service
✓ No account or login to see the temperature	An app or web login between you and the reading
✓ One purchase, list prices published	Monthly or yearly fees per sensor or site
✓ History kept for as long as you choose	History kept under the vendor's policy

Questions IT asks first

Does it need the internet? No. The network is only for downloading data and sending email alerts.

How does it connect? Ethernet or Wi-Fi on your LAN, with an address from your DHCP server. PoE available.

Remote access? Only if you set up port forwarding on your own router.

Many users? TView Server on your own Windows PC gives a browser dashboard with roles and an audit trail.

Does it report to 2DI? No. There is no 2DI cloud or account. Your readings never pass through us.

Can it run air-gapped? Yes. Keep it off the network and download the log by USB.

Secure records? Logs can't be altered; TView files are encrypted, supporting 21 CFR Part 11.

Power failure? 100-hour backup battery; the log survives a complete power loss.

Government, military and healthcare: no cloud service holding your data and no vendor account to set up or renew. 2DI is SAM registered (CAGE 3LWH6) and accepts purchase orders, government purchase cards, Net 30 and tax-exempt orders.
